Project Design Rubric

Criteria	Very Good (10-8)	Good (7-5)	Fair (4-3)	Unsatisfactory (2-1)	Score
1. Visibility of System Status – the design should always keep users informed about what is going on, through appropriate feedback within a reasonable amount of time					
1.1 The design clearly communicates its state.					
1.2 Feedback is presented quickly after user actions.					
Average Score					

Criteria	Very Good (10-8)	Good (7-5)	Fair (4-3)	Unsatisfactory (2-1)	Score
2. Match Between System and the Real World – the design should speak the users' language. Use words, phrases and concepts familiar to the user, rather than internal jargon. Follow real-world conventions, making information appear in a natural and logical order.					
2.1 The user is familiar with the terminology used in the design.					
2.2 The design's controls follow real-world conventions.					
Average Score					

Criteria	Very Good (10-8)	Good (7-5)	Fair (4-3)	Unsatisfactory (2-1)	Score
3. User Control and Freedom – users often perform actions by mistake. They need a clearly marked “emergency exit” to leave the unwanted action without having to go through an extended process.					
3.1 The design allows users to go back a step in the process.					
3.2 Users can easily cancel an action.					

Average Score	
---------------	--

Criteria	Very Good (10-8)	Good (7-5)	Fair (4-3)	Unsatisfactory (2-1)	Score
4. Consistency and Standards – users should not have to wonder whether different words, situations, or actions mean the same thing. Follow platform and industry conventions.					
4.1 The design follow industry conventions.					
4.2 Visual treatments are used consistently throughout the design.					
Average Score					

Criteria	Very Good (10-8)	Good (7-5)	Fair (4-3)	Unsatisfactory (2-1)	Score
5. Error Prevention – good error messages are important, but the best designs carefully prevent problems from occurring in the first place. Either eliminate error-prone conditions, or check for them and present users with a confirmation option before they commit to the action.					
5.1 The design prevents slips by using helpful constraints.					
5.2 The design warns users before they perform risky actions.					
Average Score					

Criteria	Very Good (10-8)	Good (7-5)	Fair (4-3)	Unsatisfactory (2-1)	Score
6. Recognition Rather Than Recall – minimize the user’s memory load by making elements, actions, and options visible. The user should not have to remember information from one part of the interface to another. Information required to use the design (e.g. field labels or menu items) should be visible or easily retrievable when needed.					
6.1 The design keeps important information visible, so that users do not have to memorize it.					
6.2 The design offers help in-context.					
Average Score					

Criteria	Very Good (10-8)	Good (7-5)	Fair (4-3)	Unsatisfactory (2-1)	Score
7. Flexibility and Efficiency of Use – shortcuts (hidden from novice users) may speed up the interaction for the expert user such that the design can cater to both inexperienced and experienced users. Allow users to tailor frequent actions.					
7.1 The design provides accelerators like keyboard and shortcuts and touch gestures.					
7.2 The content and functionality can be personalized or customized for individual users.					
Average Score					

Criteria	Very Good (10-8)	Good (7-5)	Fair (4-3)	Unsatisfactory (2-1)	Score
8. Aesthetic and Minimalistic Design – interfaces should not contain information that is irrelevant or rarely needed. Every extra unit of information in an interface competes with the relevant units of information and diminishes their relative visibility.					
8.1 The visual design and content is focused on the essentials.					
8.2 There are no distracting, unnecessary elements in the interface.					
Average Score					

Criteria	Very Good (10-8)	Good (7-5)	Fair (4-3)	Unsatisfactory (2-1)	Score
9. Help Users Recognize, Diagnose, and Recover from Errors – error messages should be expressed in plain language (no error codes), precisely indicate the problem, and constructively suggest a solution.					
9.1 The design use traditional error message visuals, like bold, red text.					
9.2 The design offers a solution that solves the error immediately.					
Average Score					

Criteria	Very Good (10-8)	Good (7-5)	Fair (4-3)	Unsatisfactory (2-1)	Score
10. Help and Documentation – provide documentation to help users understand how to complete their tasks.					
10.1 The help documentation is easy to search.					
10.2 The help provided in context right at the moment when the user requires it.					
Average Score
